

Micro:bit and iPad Setup guide

1 Go to the iPad home screen and open the **micro:bit** app.

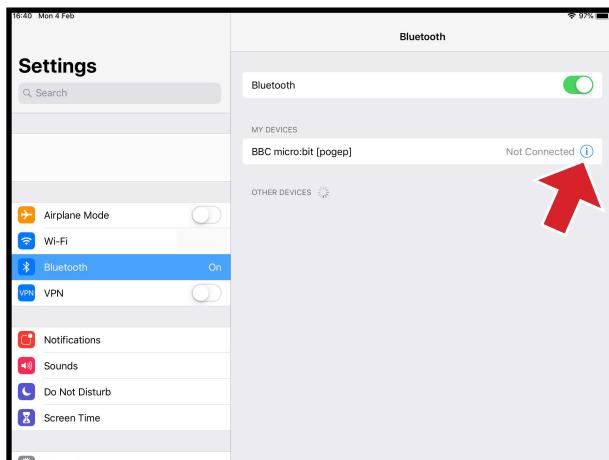

2 Tap the **Choose micro:bit** button.

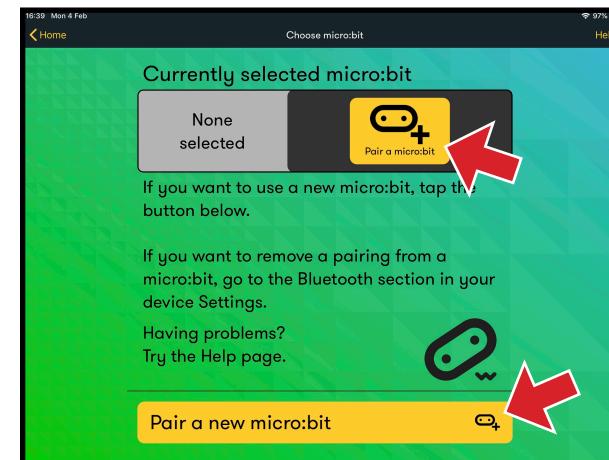

3a Unpair any currently selected micro:bits by tapping the red wastebasket and doing steps **3b** and **3c**, if **None selected** continue at **4**.

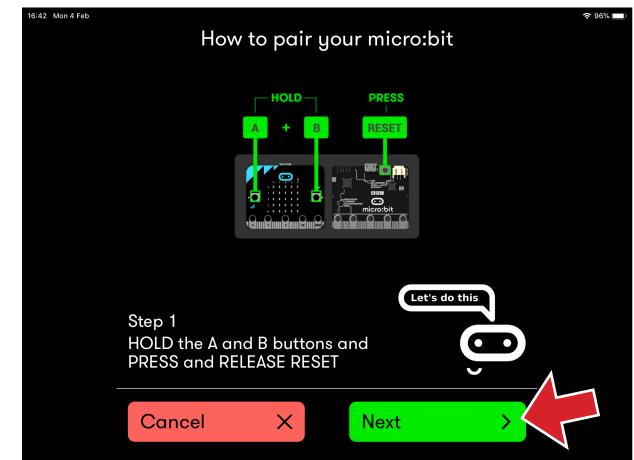

3b To finish unpairing a micro:bit, return to the iPad home screen, open the **Settings** app and tap on **Bluetooth**.

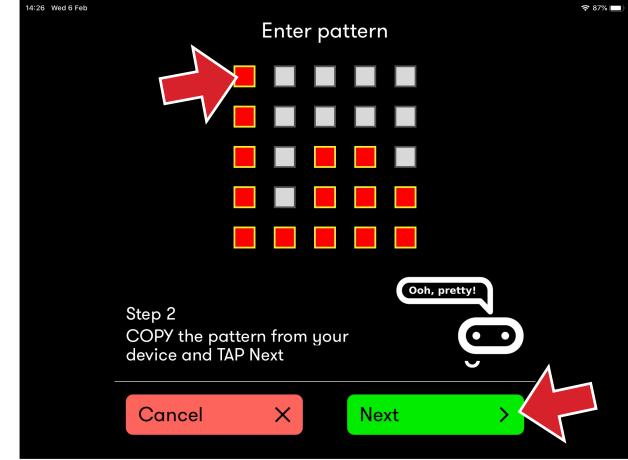

3c Tap the ⓘ icon next to each **BBC micro:bit**, then **Forget This Device**. Return to the home screen and re-open the **micro:bit** app.

4 Once this screen shows **None selected**, tap either of the **Pair a new micro:bit** buttons.

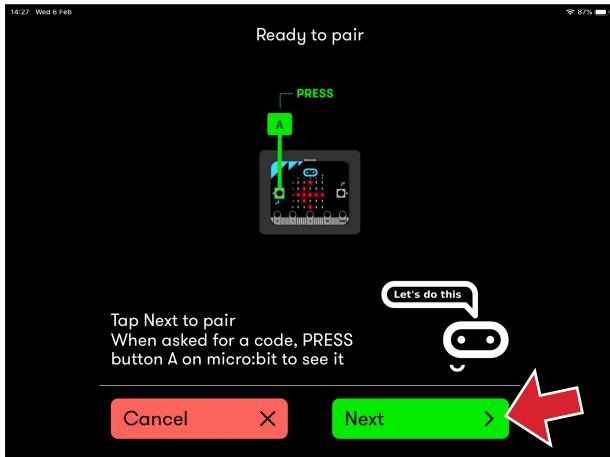

5 Hold down the micro:bit **A** and **B** buttons, at the front of the micro:bit, and press and release the **Reset** button at the back of the micro:bit. **Hold both A and B buttons until the LEDs show a pattern of columns.**

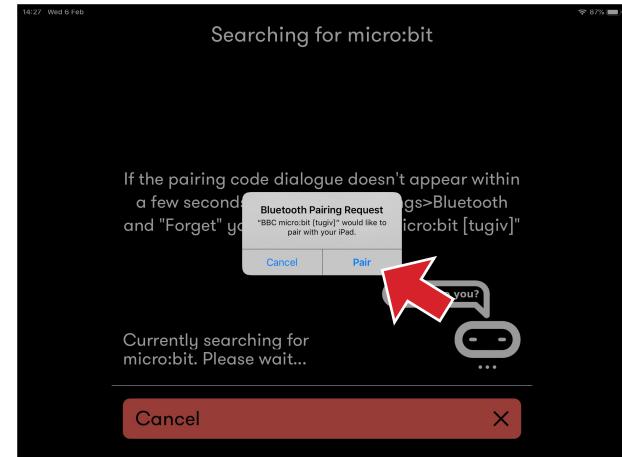

6 Copy the pattern from the micro:bit LEDs onto the iPad by tapping the highest square in each column, then tap **Next**.

- 7 You will *not* normally be asked for a code, but be ready to press the **A** button on the micro:bit and enter the code if asked. Tap **Next**.

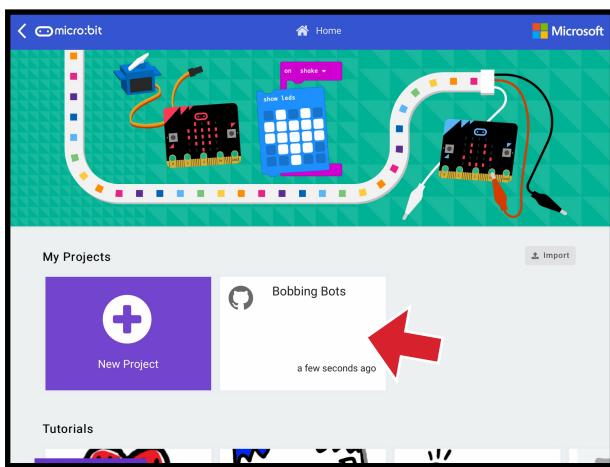

- 8 When the **Bluetooth Pairing Request** box is shown, tap the **Pair** button.

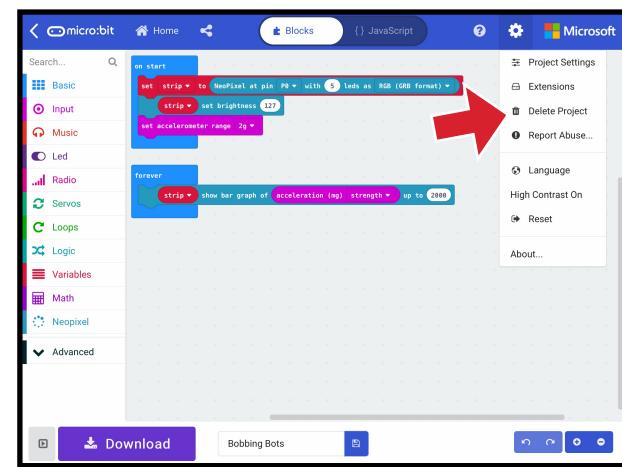

- 9 The micro:bit will show a tick on the LEDs when paired, you should now switch it off. Tap **OK** and then tap **Home** in the top left corner.

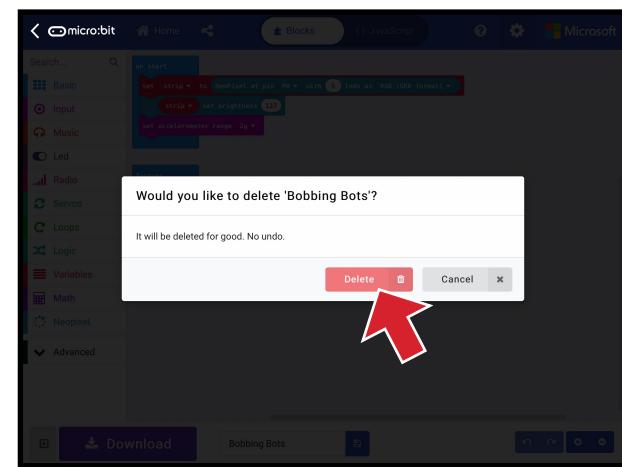

- 10 Tap **Create Code** to open the code editor.

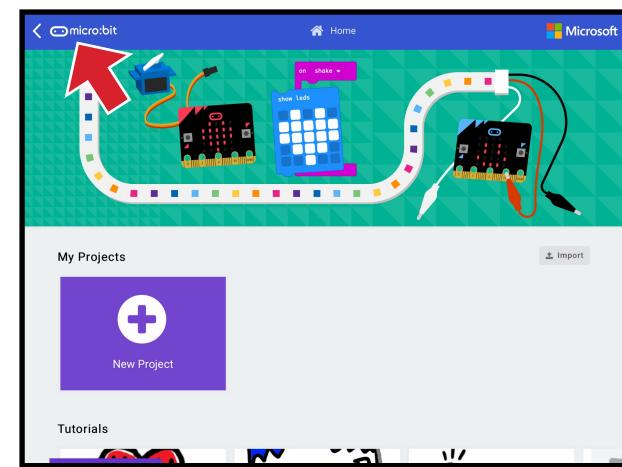

- 11 If there is a project shown in the **My Projects** list, tap on it and follow steps 12b and 12c to delete it. Otherwise continue at 13.

- 12a Tap on the gear wheel in the upper right of the screen to open the project menu, then tap **Delete Project**.

- 12b Tap **Delete** to confirm.

- 12c If there are no projects shown, then the iPad is ready to use – tap the **micro:bit** button to return to the main menu.
